

## Are you searching for a better way to work with data?

MongoDB offers the best way to work with data due to the ease, flexibility, performance and versatility of the document model.

The native distributed capabilities of MongoDB make it easy for customers to intelligently place data where they need it for high availability, scalability, locality, regulatory and other key business requirements.

Developers have the freedom to run MongoDB anywhere, from on-premise to consuming MongoDB as a service in the public cloud.
